
Customer Churn Analysis

SaaS Communications

- We have ~\$180k MRR at risk right now.
 - **26.5%** of our customers churn.
 - Goal is to reduce churn by 30% through proactive intervention.
-

Who Churns? Why it matters?

- Month-to-month customers churn at 42% — 15x more than two-year subscribers
- Clients in the first year churn ~20% more
- Lack of Tech Support (88% of the Senior customers that churn don't have T.S)

Churn % - Contract

Churn % - Tenure (Months)

MRR at Risk - Financial Impact

Total MRR

\$316,985.75

At Risk MRR

\$178,750.70

Churn Rate (%)

26,54%

High Risk - Count

620

Saving just **30%** of at-risk MRR recovers ~**\$53k/month** →
\$642k/year

Model results — What predicts churn?

Our XGBoost model identifies **77%** of churners **before they cancel** (AUC-ROC: 0.84)

Contract:

- Push benefits and discounts to annual contracts.
- Migration from monthly contract to annual can **reduce churn** from **42% to 11%**.
- Lifetime value > Discount margin

Tenure:

- Create a **onboarding/welcome program** for the first months, doubling the support and attention.

Tech Support + Online Security:

- **Free tech support** in the first 90 days, specially for **new clients** and clients with **Fiber Optic**.
-

Next steps — ROI and action plan

Priority 1: CS direct 1:1 contact with **High Risk**.

Priority 2: Automated **retention campaign** for **Medium Risk** (- Email offering discounts to upgrade plan).

Priority 3: Structural changes — annual contract incentives, onboarding program, free tech support trial.

Estimated **\$642k/year** saved at **30%** retention success rate.
